Mandatory standard
Mandatory safety requirements for prams and strollers took effect in July 2008. These are based on Australian Standard AS/NZS 2088:2000 Prams and strollers - safety requirements.

Some of these safety requirements include:

- A tether strap to help parents and carers keep control of the pram. There have been cases in Australia where children have died when the pram or stroller has rolled away into dangerous situations
- An inbuilt restraint harness to protect the child from falls
- A parking brake to ensure the pram or stroller can't roll away

Second-hand Prams and Strollers
If you plan to use a second-hand pram or stroller it should meet the Australian Standard. All the necessary parts must be in good working order and you need full instructions for safe use. Heavy fines may apply for supplying second-hand prams or strollers that do not comply with the mandatory standard.

Online Purchasing
Be careful when buying online. It is wise to check that your purchase meets mandatory Australian safety standards and has not been recalled in Australia or another country. Consumer guarantees may be difficult to enforce if you purchase a product from an overseas supplier and you may not be able to obtain compensation if the goods cause an injury.
**Safety Features for Prams and Strollers**

When selecting a pram or stroller check that it has an Australian Standards label. To ensure the safety of your child:

- Select a stable design, with easy-to-use frame locks.
- It needs an easy-to-use 5 point adjustable harness (crotch, legs, both shoulders, waist).
- Make sure the frame locks operate properly so it will not collapse on the child.
- Ensure the pram or stroller has solid durable wheels and is easy to steer.
- Make sure the wheel locks work properly.
- Check that there are no gaps that could trap a child’s head, hands or feet.
- Make sure the adjustable recline position locks securely.
- A pram or stroller with the parcel container positioned underneath it is less likely to tip over.
- Choose a pram or stroller that is easy to assemble and disassemble and that is light to lift.
- An ‘All terrain’ pram (three wheeled pram), designed to go over many types of terrain, is versatile and can be used jogging.

**Safe Practices**

- Use the 5 point harness at all times.
- Always use the tether strap on your wrist.
- Always engage the brake as soon as you stop.
- Do not hang shopping bags or parcels from the handles. This will make the pram or stroller unstable and cause it to tip over.
- Store parcels in the container underneath the pram or stroller to stabilise their weight evenly in the pram.
- Do not put more children in a pram or stroller than it is designed for.
- Check that frame catches are locked into place and fabric fastenings are secured before every use.

- Prams are **not** recommended for young babies to sleep in or as a substitute for a proper cot. Direct (in sight) supervision is necessary.
- Babies under 6 months of age should not be placed in a stroller unless the back-rest can be adjusted to an angle of more than 30 degrees to the seat.
